Joshuwa Crosby

Senior Software Engineer | Full Stack | DevOps & MLOps | GenAI & RAG Architect | Machine Learning • Deep Learning • NLP • Big Data

United States

Summary

I am a Senior Software Engineer with over a decade of experience building scalable, data-driven solutions across the fintech and healthcare sectors. My expertise lies in bridging the gap between complex data engineering and advanced machine learning to create high-impact products that solve real-world problems.Throughout my career, I have transitioned from foundational data architecture to lead roles in machine learning, focusing on the development of robust AI models and clinical diagnostic tools. I am passionate about leveraging artificial intelligence to drive innovation, improve technical infrastructure, and deliver actionable insights through sophisticated engineering.

Experience

Natus Medical Incorporated

Senior Software Engineer
October 2023 - Present (3 years 1 month)

I spearhead the development and integration of advanced machine learning models to enhance medical diagnostic and monitoring technologies. My role focuses on architecting scalable AI solutions that transform complex physiological data into actionable clinical insights, driving innovation in healthcare delivery through robust, remote-first engineering practices.

Cognizant

Senior Machine Learning Engineer
March 2020 - September 2023 (3 years 7 months)

I built production-ready machine learning systems for predictive healthcare use cases, including risk modeling and outcome forecasting. I developed end-to-end ML pipelines covering data preprocessing, feature engineering, training, evaluation, and deployment. I implemented scalable batch and near-real-time workflows and introduced robust monitoring practices to track model drift and performance degradation. My work significantly improved predictive accuracy and reduced operational latency across multiple ML-driven services.

Payoneer

4 years 10 months

Machine Learning Engineer

November 2018 - March 2020 (1 year 5 months)

In this role, I transitioned to developing and deploying predictive models to enhance fraud detection and risk assessment capabilities. I collaborated closely with cross-functional teams to integrate machine learning solutions into the core payment platform, improving automated decision-making and operational efficiency.

Data Engineer

June 2015 - November 2018 (3 years 6 months)

I designed and maintained scalable data pipelines to process high-volume financial transactions, ensuring the integrity and availability of critical datasets. My work focused on optimizing ETL processes and building the foundational data architecture required for real-time analytics and global payment processing.

Yext

Data Engineering Intern

June 2014 - August 2014 (3 months)

Assisted in the development and optimization of scalable data pipelines to support Yext’s Knowledge Graph. Worked closely with the engineering team to automate ETL processes, ensuring high data quality and low latency for real-time search queries. Gained hands-on experience with large-scale data ingestion and distributed systems in a fast-paced production environment.

Education

Alliance University

Bachelor of Science · (September 2011 - May 2015)

Alliance University

Master of Science · (2019)
